

## **Tree Plantation Activity**

Plantation of trees and plants aids in making the environment better. It purifies the air, conserves water, helps in climate control, preserves soil and benefits the overall environment in several other ways.

It also offers numerous benefits to the mankind and we all are well aware of them. We also know that a little effort made by each one of us can make a huge difference to the overall environment on Earth. Tree plantation is basically the procedure of moving tree seedlings from their original place and planting them elsewhere for different purposes. The reason behind tree plantation is mostly forestry, landscaping and land reclamation, but for betterment of environment it is mostly ignored.

Understanding the importance of trees in our lives TMV's IHMCT arranged Tree Plantation activity on 6<sup>th</sup> July 2019 at Mohammadwadi, Pune.

36 students from 2<sup>nd</sup> year BBA-HT with 3 faculty members had participated in this activity with students of other departments. Each student was handed over 8-10 saplings of Shiso, Neem and Babul by the forest department and hence, our students planted approximately 300 saplings. Before planting the sapling the forest officers briefed the students, teachers on how to plant the saplings. The activity started at around 9.30 am till and went till 12 pm.

At the end of the activity our Institute thanked the forest department officials for helping us throughout the activity; in return they thanked us for our initiative and hundred percent participation.
